US-CL-CURRENT: 717/109; 345/700, 345/965, 345/967, 700/180

ABSTRACT:

A system which comprises: a graphical tool which is capable of building discrete phase sequential steps and a smart device control for input/output device control; a microprocessor which is capable of running the phase sequential steps; and a I/O communication processor which is capable of communicating the phase sequential steps to the input/output device.

L15: Entry 3 of 3

File: USPT

Mar 17, 1998

US-PAT-NO: 5729747
DOCUMENT-IDENTIFIER: US 5729747 A

TITLE: Design method and apparatus of computer program for business processing

DATE-ISSUED: March 17, 1998

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Tsukakoshi; Toshiharu	Kawasaki			JP

US-CL-CURRENT: 717/106; 717/110

ABSTRACT:

Without using a host computer, a computer program for object business processing is efficiently developed in a work station. A data flowchart generation unit, a system flowchart generation unit, and a program specification generation unit are provided in a distributed processor such as a work station. First of all, edit of a data flowchart of business processing which becomes the object of software development is performed. Data items extracted at this time are entered into a data item dictionary so that they may be handed over and used as input information of a data analysis unit. As for functions extracted in the edit process of the data flowchart, they are successively generated as a system flowchart and program specifications. Finally, a source program is generated.
